No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description

Sequence 2, Application US/10084971

Publication No. US20020187526A1

GENERAL INFORMATION:

APPLICANT: Human Genome Sciences, Inc.

TITLE OF INVENTION: Neutrokine-alpha Binding Proteins and Methods Based Thereon;
FILE REFERENCE: PF524PCT

CURRENT APPLICATION NUMBER: US/10/084,971

CURRENT FILING DATE: EARLIER PILICATION NUMBER: US/09/533,822

PRIOR APPLICATION NUMBER: EARLIER APPLICATION NUMBER: 60/126,599

PRIOR FILING DATE: BARLIER FILING DATE: 1999-03-10

PRIOR FILING DATE: BARLIER FILING DATE: 1999-03-10

NUMBER OF SEQ ID NOS: 5

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 2

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Seguence 7,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

US-09-94-016-11115

Sequence 11115, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHIGMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL0001307

CURRENT APPLICATION NUMBER: 60/29/949,016

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR PILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: PastSEQ for Windows Version 4.0

SEQ ID NO 1115
                                                                                                                                                                      ## SEQUENCE 11, Application US/09565423

## Patent No. 6475987

## GENERAL INFORMATION:

## PAPLICANT: SIN, HONG-Bing

## TITLE OF INVENTION: TALL-1 NUCLEIC ACID MOLECULES, PROTEINS, RECEPTORS AND

## TITLE OF INVENTION: METHODS OF USE THEREOF

## TITLE OF INVENTION: METHODS OF USE THEREOF

## TITLE OF INVENTION: METHODS OF USE THEREOF

## CURRENT APPLICATION NUMBER: US/09/565,423

## CURRENT FILING DATE: 2000-05-05

## PRIOR FILING DATE: 1999-05-06

## PRIOR FILING DATE: 1999-05-06

## NUMBER OF SEQ ID NOS: 17

## SEQ ID NO 11

## SEQ ID NO 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Sequence 13 Application US/09854864

Pacent No. 6774106

GENERAL INFORMATION:
PAPLICANT: THEILL, LARS EYDE

TITLE OF INVENTION: METHODS AND COMPOSITIONS OF MATTER CONCERNING APRIL/G70, BCMA,
TITLE OF INVENTION: BLXS/AGP-3, AND TACI
FILE OF INVENTION: BLXS/AGP-3, AND TACI
FILE REFERENCE: A-6868

CURRENT FILING DATE: 2001-09-11
PRIOR APPLICATION NUMBER: US 60/204,039
PRIOR PLING DATE: 2000-05-12
PRIOR APPLICATION NUMBER: US 60/214,591

PRIOR APPLICATION NUMBER: US 60/214,591
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 5, Application US/09854864

Patent No. 5963102

GENERAL INFORMATION:

APPLICANT: Brain, Richard J.

AITLE OF INVENTION: A LYMPHOCYTE SURFACE RECEPTOR THAT BINDS

TITLE OF INVENTION: THEREOF

NUMBER OF SEQUENCES: 11

CORRESPONDENCE ADDRESS:

ADDRESSEE: David A. Jackson, Esq.

STREET: 411 Hackensack Ave, Continental Plaza, 4th
                                                   ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ä
